Time and location

Time:	Tuesday, 14 – 15.30 h
Start date:	April 16, 2024
Location:	HS 59, Bldg. 10.81

Contact

Consultation:	by appointment
Location:	Room 122, Bldg. 10.81
Phone:	0721-608 47245
Email:	`markus.uhlmann@kit.edu`

Aim and scope of the course

- Deepening the basic knowledge of the course "Numerical Fluid Mechanics I"
- We will be working towards the simulation of the Navier-Stokes equations
- Solving a fluid flow simulation project in small teams (optimally: 2 persons)
  - project assignments will be handed out at the beginning of the course;
  - practical realisation of a flow simulation program in Matlab (alternatively: python, C/C++, FORTRAN, ...);
  - analysis, design, coding of the method in independent work and under supervision.
- Presentation of the results.

Supporting material

Please register with the E-learning system ILIAS under the following URL:
`https://ilias.studium.kit.edu/goto.php?target=crs_2366932`
There you will find all the material (including project assignments) for download. Zoom-link (just in case):
`https://kit-lecture.zoom.us/j/64709727063?pwd=Wm96bERhN0xZWUhFcjNxYjZ6R3RsQT09`

Prerequisites

- Basic fluid mechanics
- Mathematics (PDEs, numerical analysis)
- Successful participation in the course "Numerical Fluid Mechanics I" (or equivalent)
- Computer programming with Matlab
- English language

Exam

The results of the project work will be presented orally (20 minutes) with subsequent discussion.

The work will be graded according to the following criteria:

- **Project work:** 80%. Correctness, completeness and quality of the results.
- **Oral presentation:** 20%. The oral presentation of the results (beamer, slides or blackboard) shall comply with the standards for a scientific-technical presentation in terms of clarity, completeness and structure.

Contents & planning

First session (April 16, 2024): General Introduction
Goals of this course – presentation of the problems – organisational details.

Further sessions (23.4., 30.4., 7.5., 14.5., ~~21.5.~~, 28.5., 4.6., 11.6., 18.6., 25.6., 2.7., 9.7., 16.7.):
Joint discussion of your progress – problems/bottlenecks – discussion of possible solutions – monitoring your progress.

Presentation of the results (preliminary date July 23, 2024)[1]:
Presentation of the solution by the project teams (short talk, demo of their program); subsequent discussion.

Further resources

- MATLAB Campus license: http://www.scc.kit.edu/produkte/3841.php
- Freely available textbook "Numerical Recipes": http://www.nr.com (alternatively here)
